11.2.2026

Sustainability Objectives for 2026

1. SCB will prioritize its emissions reductions in line with a mitigation hierarchy and regularly evaluate opportunities and take steps to first avoid and then minimize its greenhouse gas emissions. SCB will calculate its greenhouse gas emissions in 2026 and make a financial climate contribution [1] to address residual greenhouse gas emissions, which cannot otherwise be eliminated. SCB, will, in parallel, progressively align its activities with its long-term ambition to achieve net-zero by or around 2050[2].

2. SCB will publish a Sustainability Report by the end of 2026.

3. SCB will support the abatement of 1 billion MT of CO2 through SCB's transactions by 2030.

4. SCB will finance projects that support the most-at-need communities in least developed countries while measuring and encouraging their positive outcomes. Regular updates will be issued to stakeholders to ensure transparency and impact tracking.

5. SCB will maintain SCB's Environmental Training up to date with relevant sustainability trends and available for all staff members.

6. SCB will monitor the progress towards its Diversity Improvement Goals, with the objectives to promote equity and inclusion.

[1] We contribute financially to verified climate projects that support global mitigation efforts.
[2] Our climate ambition is aligned with the Paris Agreement's highest objective to pursue efforts to limit global warming to 1.5°C, as reflected in scientific pathways that require achieving global net-zero greenhouse gas emissions by around 2050.
